

Event WiFi

ஸ | UBERCORE®

## **Overview**

Event venues like stadiums, resorts and festival grounds alike are looking to get Internet access for the staff as well as for the event attendees. This opportunity can be used to advertise special services and share information with the attendees.

Features like automatic social media login or mobile number based logins are most frequently used things.

Our expertise in deployment of wireless mesh network on small to large scale can help to achieve the requirements of all events.

## **Challenge**

Creating a wireless coverage for a large geographical area poses challenge.

### **Key Challenges:**

1. Large number of users
2. Large geographical area to cover
3. High availability
4. Huge amount of data traffic
5. Avoiding misuse

## **Solution**

### **Cloud wireless mesh access points**

Managed by cloud wireless controller, these wireless mesh access points are good in these kind of scenario. Once configured properly, these access points create a self healing wireless mesh network and create a large wireless network.

### **24x7 monitoring by AI**

The whole infrastructure is monitored 24x7 by automated AI driven cloud infrastructure and network operation center.

### **Targeted advertisement**

Our customized platform of portals and webapps allow event organizers to share important event information with the attendees. Targeted advertisements can be seeded directly into the the mobile phone of the attendee who is connected to this wireless network.

### **Benefits**

- ✓ Secure Internet access
- ✓ Self healing network
- ✓ Wide wireless coverage
- ✓ Easy login for attendees
- ✓ High speed Internet
- ✓ Easy to scale network
